RP-HPLC Purity Analysis

NOTES

The main peak at 11.37 min matched the retention time of the BPC-157 reference standard, which is consistent with the named compound. It accounts for 99.21% of total peak area at 214 nm. Two minor related-substance peaks, at 10.49 and 12.05 min, account for 0.79% together.

Mass Spectrometry

Mass consistent with target by Mass Spec (ESI-MS)

NOTES

The doubly protonated ion was observed at m/z 710.3611, 2.39 ppm from the theoretical value for C62H98N16O22. The mass is consistent with the named compound and adds confidence for identity, together with the HPLC retention time match.

Research use only. Not for human or veterinary use. Results relate only to the sample as received and tested. Not usage or dosage guidance, and not a claim about the intended use, application, or functionality of this compound. The sample was supplied by the client. Amino Metrics did not collect it and cannot confirm its origin or handling. Retention time matching a reference standard is consistent with the target compound. It is not proof of identity, and co-eluting compounds are not excluded. The stated identity and label claim of the sample are the client's declaration.
